Smarter Dashboards

CHECKLIST

Is your dashboard effective? Use the following checklist to verify whether your dashboard follows design best practices:

- Does your dashboard clearly tell you what your next steps are?
- Is all the relevant information visible on one screen?
- Did you limit the number of colors in the dashboard to a reasonable amount?
- Is the order of the graphs thought out well?
- Did you avoid using area charts, such as pie charts, radar graphs, or concentric circle graphs?
- Do you have an optimal ratio of non-data pixels to data pixels?
- Have you put thought into what data is represented by bar charts and what data is represented by line charts?
- Are you using the most important sections of your screen effectively?
- Is your dashboard designed with the target audience in mind, e.g. is it customized to the user's specific needs?
- Are you using the Dashboard, Analysis, Reporting (DAR) principle?

How many boxes were you able to check? The more checks, the more effective your dashboard!
